PANEL STUDY OF ENTREPRENEURIAL DYNAMICS II

The Panel Study of Entrepreneurial Dynamics (PSED) was designed to enhance the scientific understanding of how people start businesses. The study is designed to offer valid and reliable data on the process of business formation based on a nationally-representative sample of nascent entrepreneurs attempting to start new businesses. The survey includes information on the characteristics of members of the adult population attempting to start new businesses, the kinds of activities entrepreneurs undertake during the business start-up process, and the characteristics of the start-up efforts that become new firms.

The Panel Study of Entrepreneurial Dynamics II is coordinated by the University of Michigan's Survey Research Center under the direction of Richard Curtin and coprinciple investigator Paul Reynolds. The design of the PSED II panel sample and the questionnaire was a collaboration of a group of academic researchers. The panel survey is a multi-year tracking of a cohort of individuals starting new businesses. The panel participants were identified prior to the launch of their new firms and are being tracked through gestation, launch, and to the eventual growth or death of the firm.

Special thanks are due to the **Ewing Marion Kauffman Foundation** for providing the necessary funding to complete the first three waves of the project.

Special thanks are also due to the **U.S. Small Business Administration** for providing additional funding to extend the analysis of the second and fourth waves of interviewing.

Special thanks are due to the **National Science Foundation** (Grant Numbers 059579 and 062141) for providing funding for the fourth, fifth, and sixth interview waves.

FORMAT OF CODEBOOK

The codebook contains the questions asked in the six waves of the Panel Study of Entrepreneurial Dynamics II (PSED II), along with the screener questions that were used to select the panel. If the question wording changed between waves, the changes are noted clearly. The first six columns contain the variable numbers. If the question was asked in all waves, those columns will contain the variable numbers. The variable numbers are normally identical to the question number in the questionnaire, except Wave A questions have a leading "A", Wave B have a "B" as the initial character, Wave C will have "C", Wave D will have "D", Wave E will have "E", and Wave F will have "F". For example, question E18 in Wave A is recorded as AE18, the same question for Wave B is BE18, Wave C is CE18, Wave D is DE18, Wave E is EE18, and Wave F is FE18. The variable numbers are consistent through the waves even if their placement in the questionnaire changed. For example, question A1 was asked at the very beginning of Wave A, but not asked for a couple pages into Wave B, Wave C, Wave D, Wave E, or Wave F, but the variables are still AA1, BA1, CA1, DA1, EA1, FA1 for consistency and ease of use.

The columns also contain the frequencies for the variable for each wave. Whenever answer codes were open-ended, no frequencies are listed, otherwise the codebook would become unmanageable. The far right column lists the question wording, code values, and the meanings of the codes. The sum of the frequencies equals the total number of cases who were eligible to be asked the question. Eligibility depends on a number of factors, including the respondents answers to prior questions, if the question was answered in the previous wave, if the respondent declined to participate in the survey, or if the respondent was not eligible for a subsequent wave. All ineligible respondents were coded with the SAS or SPSS system missing value.

The screener interviews were conducted from September 2005 to February 2006. Wave A interviews were conducted from September 2005 to March 2006. Wave B interviews were conducted one year later, from October 2006 to March 2007. Wave C interviews were conducted two years later, from October 2007 to May 2008. Wave D interviews were conducted three years later, from October 2008 to April 2009. Wave E interviews were conducted four years later, from October 2009 to April 2010.

Wave F interviews were conducted five years later, from October 2010 to April 2011.

This codebook should be used in conjunction with the data set labeled 'PSEDII_SCRN_ABCDEF.SPS' or 'PSEDII_SCRN_ABCDEF.SAS7BDAT'.

						All analyses of the cases included in this data file should use the weight variables. The weights were developed to help insure that the data is representative of all identified nascent entrepreneurs in the U.S. The weights correct for differences in selection probabilities and differential nonresponse rates. The March 2005 Current Population Survey conducted by the U.S. Bureau was used to post-stratify the data based on sex, age, household income, and race. The weights have been centered so that the sum of the weights is equal to the actual sample size. Any analysis of a subset of the data should re-center the weights so that the mean weight remains equal to 1.0.
